

# Mezzanine Flooring

Add a brand new level to your business

**Clark Handling is a leading supplier and installer of quality mezzanine floors. Our designs will help you create that extra space your business needs, without the expense and inconvenience of relocating. We have been designing and installing mezzanine floors for over 16 years. Our projects range from small single storey floors to multi-levels where required.**

To complement our mezzanine flooring, we also provide space planning and design services, providing a full fit out and refurbishment of office and other work spaces such as warehouses, factories etc. Mezzanine installation is carried out throughout the UK using experienced and qualified teams. All teams are qualified to SIERS (Storage Equipment Installation Registration Scheme) and carry out installation within the SEMA codes of practice. Clark Handling is also a member of the Safe Contractor scheme, complying with all aspects of today's Health & Safety requirements, when installing this type of equipment.

## Warehousing

The installation of a single or multi-level mezzanine floor greatly expands storage capacity in your warehouse. We will fit safety barriers and access equipment as required.

## Production

Our mezzanine floors are popular with production and manufacturing businesses as the drive to increase productivity from existing premises gather pace.

## Automation

Mezzanine floors are an ideal solution for expanding your auto-motion process. The addition of a single or multi-tiered mezzanine floor can effectively make use of overhead space to accommodate conveyor systems.

## Office & Storage

Make more use of your unused headroom. We can transform this wasted space into productive office or storage space.

## Retail

The combination of lightweight construction, and complimentary powder coated paint finish, make a Clark mezzanine ideal for retail environments.

## Overview

Once we have your enquiry we will visit your site, or work from your drawings provided to issue you with a quotation to supply and install. Once we receive your order, we will send an engineer to carry out a site survey using accurate laser surveying equipment. Data from the survey is fed into the design system to enable the structural design to be formulated, prior to issuing you with CAD drawings to ensure we have understood your requirements prior to the supply and installation process.

We will also offer assistance with Building Control and the Fire Department to make sure all current regulations are met within our design, and your needs.

## Fit Out & Refurbishment

To complement our mezzanine floors, we also design, fit out and refurbish offices and other work spaces.

- Partitioning, including full height glass partitioning
- Ceilings, including suspended ceilings
- Fire resistant walls, partitioning and ceilings
- Dry lining and feature wall coverings
- Smoke detection systems
- Power and data cabling
- Lighting, Heating, air conditioning and ventilation systems
- Decoration including painting & wall covering vinyl.
- Floor coverings, including carpet tiles, wood effect vinyl and wood.
